DETAILED ACTION

Allowable Subject Matter

1. Claims 1-5 are allowed.
2. The following is an examiner's statement of reasons for allowance: with respect to claim 1, in addition to other limitations in the claim, the prior art fails to teach, disclose or render obvious the applicant's invention as claimed, particularly the feature describing the second nodes of the respective paired transistor units also are connected to each other, and the upper and lower voltage level (VDD, VSS) are such that the transistor units operate in subthreshold.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
4. Sakiyama et al. (2005/0162212) and Arimoto et al. (6,232,793) disclose an integrated circuit having a plurality of series connected inverters with a PMOS and an NMOS transistors, each transistor included four nodes and one of the node is a control terminal connected to bias the transistors back-gate, but the output nodes of the inverters are not connected to each other.
